

The SNWA reviews its water resource plan annually.

Key Inputs:

- Population forecast from the University of Nevada, Las Vegas Center for Business and Economic Research (CBER)
- Hydrologic modeling from the U.S. Bureau of Reclamation
- Conservation progress (actual and projected)

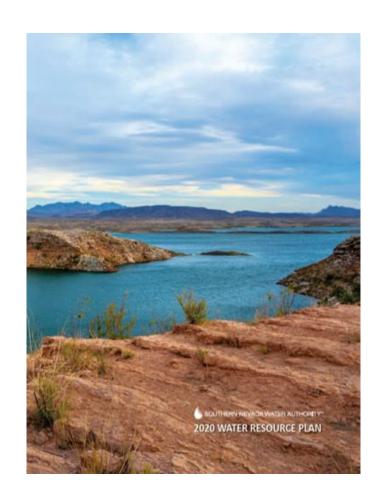

The SNWA's Water Resource Portfolio includes a diverse set of resource options that will be used in tandem with demand reduction tools to reliably meet the community's current and future water resource needs.

Permanent Resources	Temporary Resources	Future Resources				
Colorado River (SNWA)	Southern Nevada Groundwater Bank	Transfers and Exchanges – Permanent Future Supply Desalination & Colorado River Partnerships				
Nevada Unused Colorado River (Non-SNWA)	Interstate Bank (Arizona)	Transfers and Exchanges – Virgin River/Colorado River Augmentation				
Tributary Conservation ICS	Interstate Bank (California)	Garnet & Hidden Valleys Groundwater				
Las Vegas Valley Groundwater Rights	Intentionally Created Surplus (Lake Mead storage)	Tikaboo & Three Lakes Valley Groundwater				

2021 Plan Changes:

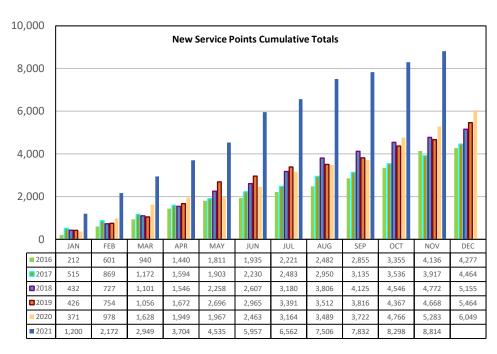

- Extended the planning horizon through 2072.
- Updated demand range based on the new population forecast.
- Applied new assumptions about conservation achievements.
- Incorporated the latest Colorado River supply outlook.
- Developed planning scenarios that reflect supply impacts under variable hydrology.
 - 14.7 MAFY
 - 12.9 MAFY
 - 11.0 MAFY

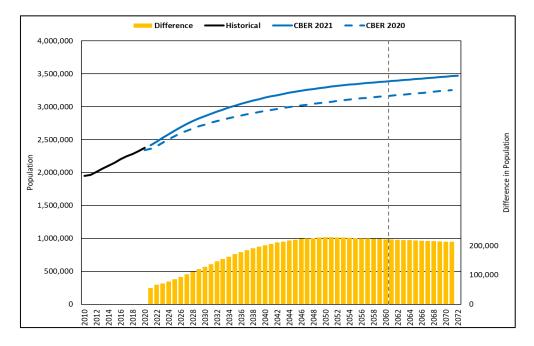

Supply and demand inputs have changed significantly.

New account growth and longer-term forecasts are much higher than prior years.

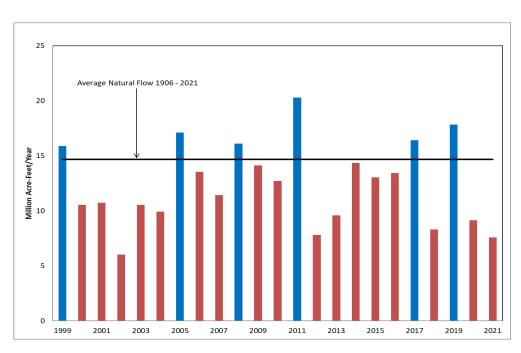

New Account Growth (LVVWD)

2021 CBER Forecast

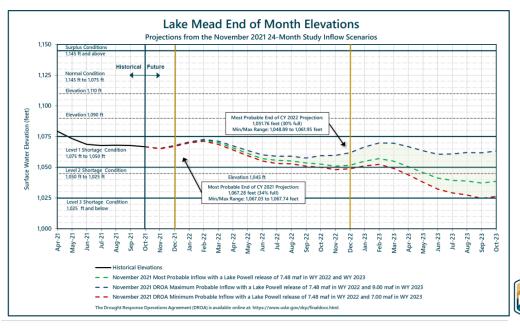

This affects the volume and timing of future resource needs.

Annual Colorado River inflows have been at or below 11.0 million acre-feet for nearly half of the last 22 years.

Colorado River Inflows

24-Month Study

Further water-level declines are expected.

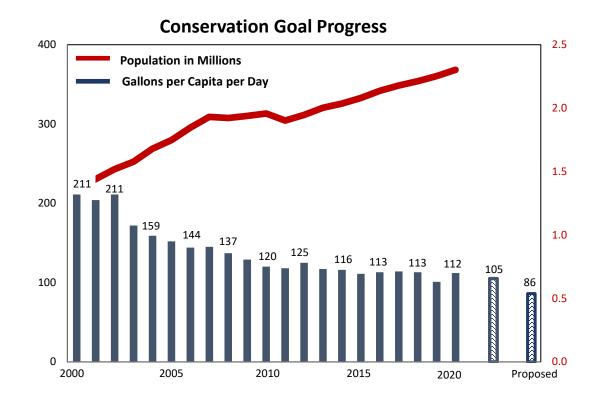

There is a high probability for shortage over the long-term planning horizon.

Nevada is making DCP contributions and will take shortage next year but additional reductions from all stakeholders are needed to preserve Colorado River operations.

Higher levels of efficiency are needed to address population growth, offset supply impacts due to shortage, reduce upward pressure from climate change, and maximize the availability of existing water supplies.

WATER RESOURCE PLAN UPDATE

As part of its 2021 planning effort, the SNWA considered:

- The water resource implications of higher demands and lower flows over the planning horizon.
- The extent to which additional conservation could extend permanent resources and delay the use of temporary and future resources.
- Specific conservation actions that could be implemented to achieve additional conservation and efficiency gains.

As recommended by IRPAC, the SNWA is focused on reducing consumptive water use.

Landscape Efficiency

Cooling Efficiency

Water Loss Control

Irrigation Compliance

New Development Efficiency

Existing and planned measures do not go far enough.

Current Programs & Policies							
Golf course water budgets	Mandatory watering restrictions	Incentive programs					
Customer leak notification	Asset management programs	Tiered water rates					
Water waste enforcement & fees	Out-of-Valley Water Use Policy	Utility leak detection					
Turf limits	Turf development standards	Education & outreach					

Work in Progress							
AB356 non-functional turf removal (2026)	AMI upgrades (2024) and leak resolution	Increased water waste enforcement					
Cooling efficiency research & studies	Large water user policy (new development)						

Additional actions are needed to address changing conditions.

Additional actions are needed to address changing conditions.

Conservation Opportunities for Existing Users:

- Reduce golf course water budgets
- Require high-efficiency cooling retrofits
- Implement park efficiency improvements
- Make water rate changes to incentivize conservation
- Develop and implement a septic system conversion policy

Additional actions are needed to address changing conditions.

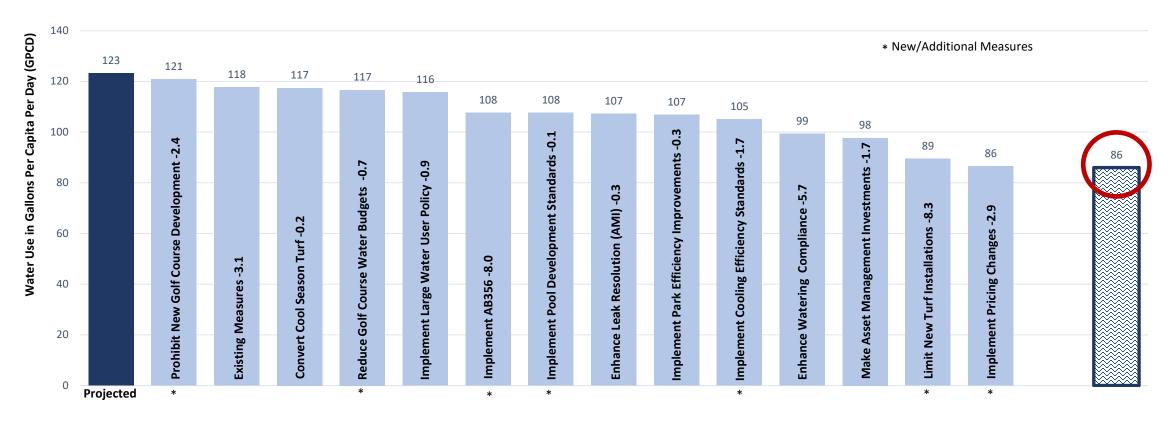

Conservation Opportunities for New Development:

- Prohibit new golf course development
- Limit new pool construction size
- Update development standards for cooling technology
- Restrict turf in new development
- Implement large water user policy

Achieving higher levels of efficiency will extend the availability of current resources and reduce the need for temporary and future resources.

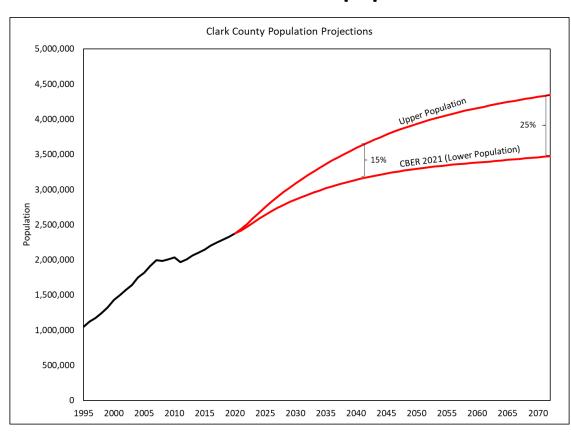

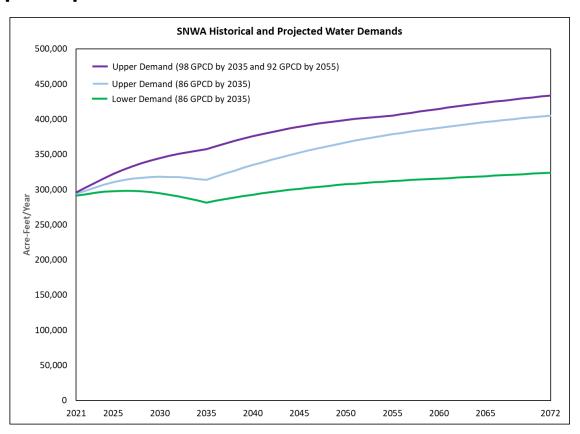

It will also offset supply reductions associated with shortage and help to reduce upward pressure on demands associated with climate change.

2021 Planning Assumptions & Planning Scenarios

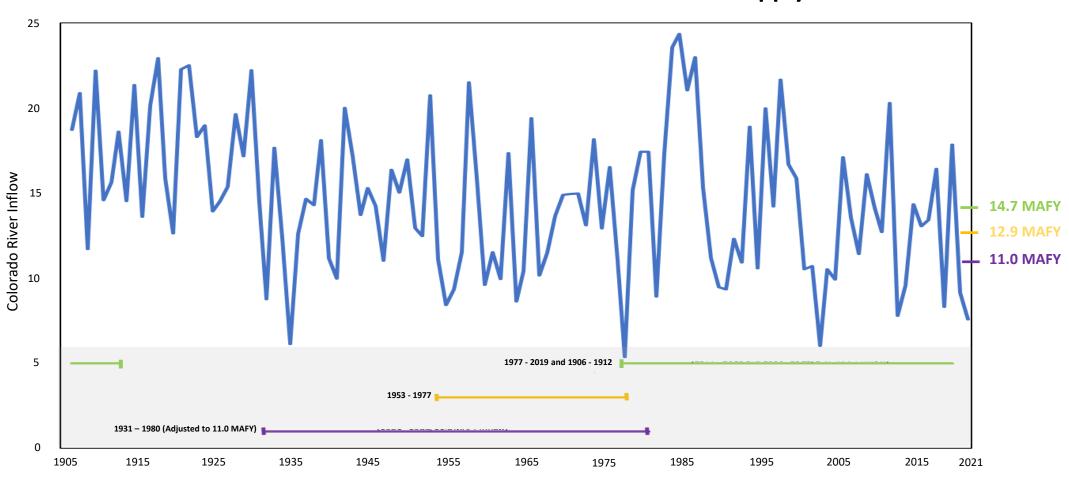

The 2021 Water Resource Plan considers higher population and lower per capita water use.

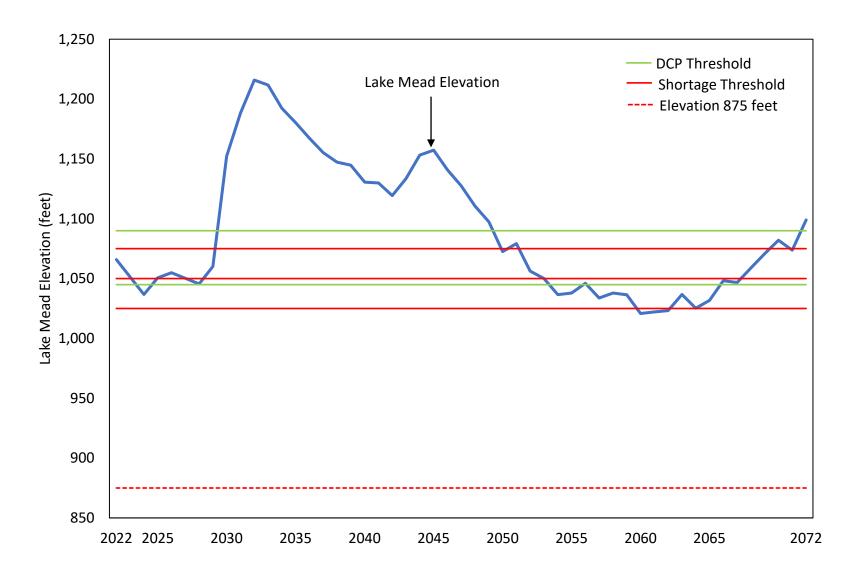

The 2021 Water Resource Plan considers three water supply conditions.

14.7 MAFY Inflow Planning Scenarios

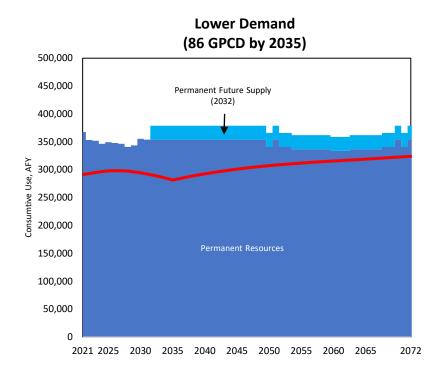

14.7 MAFY Inflow

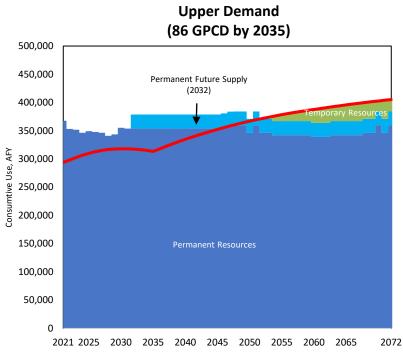

This hydrology is more optimistic than current conditions.

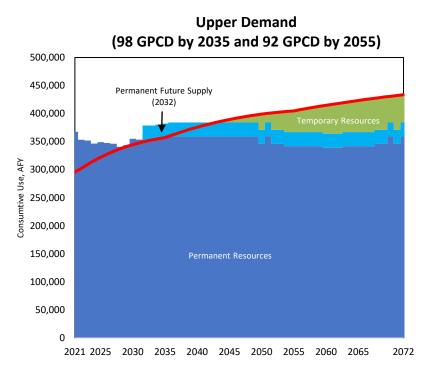

Over the most recent 22-year period, there were five years with inflows at or above 14.7 MAF.

14.7 MAFY Inflow Scenarios

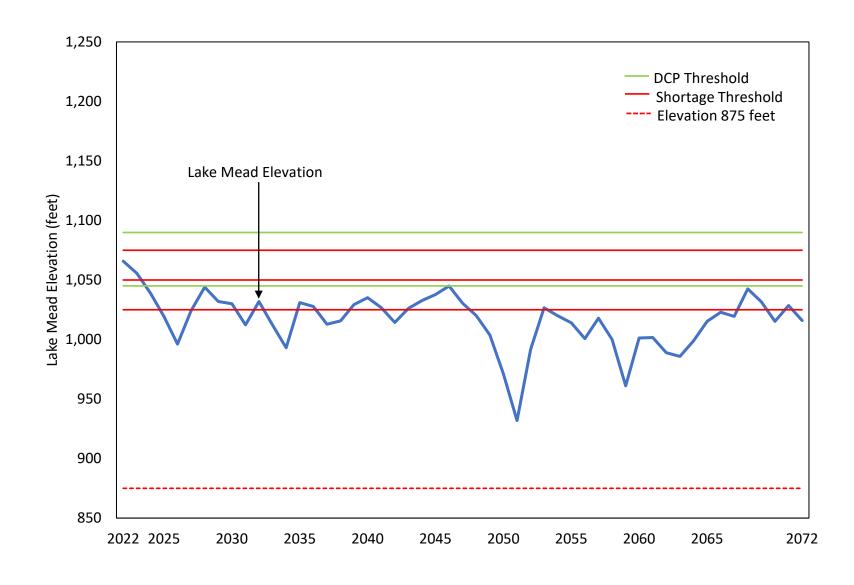

12.9 MAFY Inflow Planning Scenarios

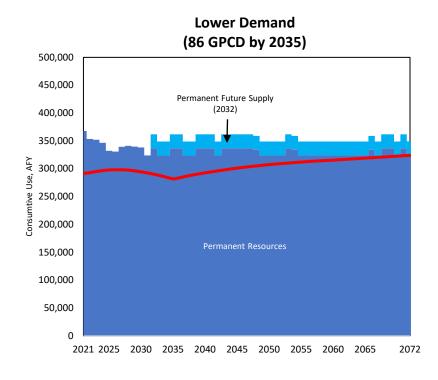

12.9 MAFY Inflow

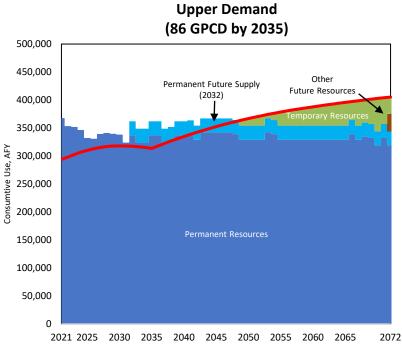

This hydrology is slightly more optimistic than current conditions.

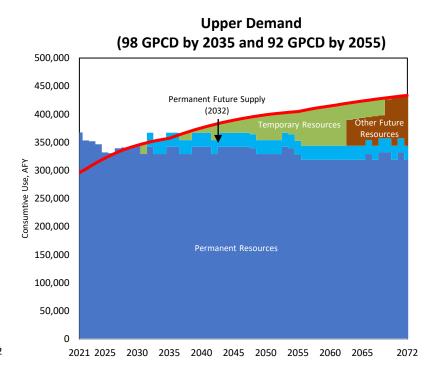

Over the most recent 22-year period, inflows average approximately 12.3 MAF.

12.9 MAFY Inflow Scenarios

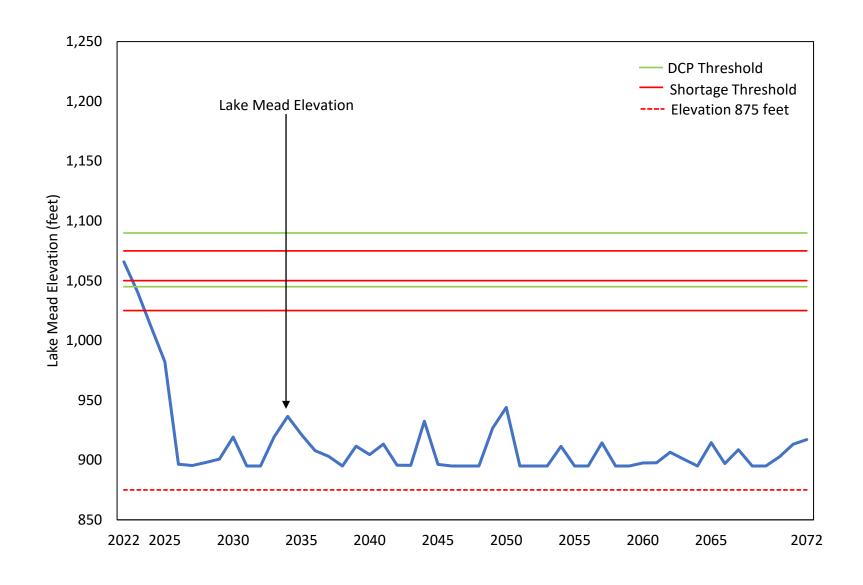

11.0 MAFY Inflow Planning Scenarios

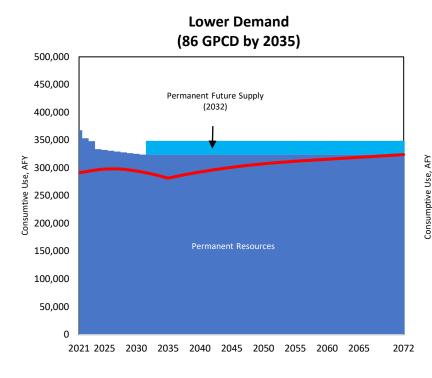

11.0 MAFY Inflow

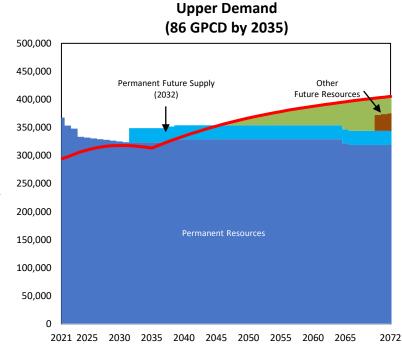

This hydrology is less optimistic than current conditions but reflects the potential for significant hydrological change.

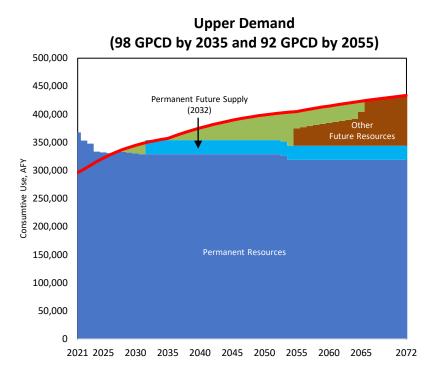

Over the most recent 22-year period, there were nine years with inflows at or below 11.0 MAF.

11.0 MAFY Inflow Scenarios

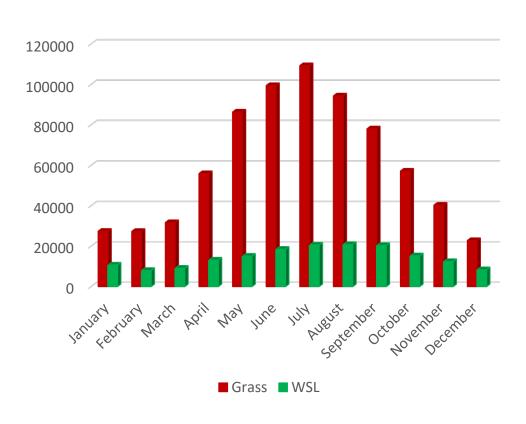

AB356 and Turf Definitions

AB-356

A long-term analysis of turf conversion projects shows that drip-irrigated landscapes use an average of ~75 percent less water per year

Potential water savings associated with replacing non-functional turf could reach 9.5 billion gallons (29,150 acre-feet)

NONFUNCTIONAL TURF

A new law passed during the 81st Legislative Session prohibits our community's water supplies from watering existing unused grass by 2027.

Single family residential homes excluded.

- Neighborhood entries
- Streetscapes
- Medians
- Roundabouts
- Non-residential applications (commercial buildings, office parks, etc.)

Non-functional turf is now defined as:

"Non-functional Turf" means irrigated lawn grass area not meeting the below definition of Functional Turf, including without limitation, such areas in the following locations:

- <u>Streetscape Turf:</u> except as otherwise specified turf located along public or private streets, streetscape sidewalks, driveways and parking lots, including but not limited to turf within community, park and business streetscape frontage areas, medians and roundabouts
- <u>Frontage, Courtyard, Interior and Building Adjacent Turf:</u> turf in front of, between, behind or otherwise adjacent to a building or buildings located on a property not zoned exclusively as a single-family residence, including but not limited to maintenance areas and common areas.
- <u>Certain HOA-Managed Landscape Areas</u>: turf managed by a homeowner association that does not provide a recreational benefit to the community or that otherwise does not qualify as Functional Turf, regardless of the property zoning.

Functional turf is now defined as:

"Functional Turf" means an irrigated lawn grass area that provides a recreational benefit to the community and is:

- (a) located at least 10 feet from a street (except as otherwise specified), installed on slopes less than 25 percent, and not installed within street medians, along streetscapes or at the front of entryways to parks, commercial sites, neighborhoods or subdivisions; and
- (b) Active/Programmed Recreation Turf, Athletic Field Turf, Designated Use Area Turf, Golf Course Play Turf, Pet Relief Turf, Playground Turf or Resident Area Turf, as these terms are further defined and qualified.

"Active/Programmed Recreation Turf" means irrigated lawn grass in an active/programmed recreation area on homeowner association-owned or managed property or at a public park or water park (excluding park streetscape and community frontage areas).

Active/programmed recreation turf at existing properties must be:

- 1,500 contiguous square feet or greater.
- Co-located with facilities, including but not limited to trash bins, benches, tables, walking paths and/or other recreational amenities.
- Located at least 10 feet from a public or private street or interior facing parking lot unless:
 - The contiguous turf area is at least 30 feet in all dimensions; or
 - The turf is immediately adjacent to an athletic field

"Athletic Field Turf" means irrigated lawn grass used as a programmed sports field or for physical education and intermural use that is 1,500 contiguous square feet or greater, not less than 30 feet in any dimension, and located at a school, daycare, youth recreation center, senior center, public park, private park, water park or religious institution.

Athletic Field Turf may be located less than 10 feet from a public or private street or interior-facing parking lot if the contiguous turf area is at least 30 feet in all dimensions.

"Designated Use Area Turf" means irrigated lawn grass designated for special use at cemeteries and mortuaries.

RECOMMENDATION #2 (cont.)

FUNCTIONAL TURF TYPES

"Golf Course Play Turf" means irrigated lawn grass at a golf course in driving ranges, chipping and putting greens, tee boxes, greens, fairways and rough.

RECOMMENDATION #2 (cont.)

FUNCTIONAL TURF TYPES

"Pet Relief Turf" means irrigated lawn grass in a property providing commercial and retail services for pets that is designated for pet use (such as veterinarians or boarding facilities). Pet Relief Turf may not exceed 200 square feet.

"Playground Turf" means irrigated lawn grass in designated play areas with playground amenities, including but not limited to slides, swings and climbing structures on homeowner association-owned or managed property or at a public park, water park, school, daycare, youth recreation center, senior center or religious institution.

Playground Turf may be located less than 10 feet from a public or private street if fenced.

"Resident Area Turf" means up to 150 square feet of irrigated lawn grass per dwelling unit at multi-family residential properties, single-family attached properties, commercial/multi-family mixed use properties, extended stay hotels/motels, or assisted living and rehabilitation centers used by tenants for recreation and leisure.

Resident Area Turf must be in areas reasonably accessible for active use by residents and therefore may not be located in streetscape frontages, parking lots, roundabouts, medians, driveways and other non-accessible or exclusive-use areas such as commercial courtyards.

<u>Implementation</u>

The SNWA is allocating staff and resources to meet the anticipated demand for Water Smart Landscapes projects

- Initial response to the legislation has been a 200+ percent increase in multi-family conversion appointments and a 300+ percent increase in commercial/institutional appointments
- The SNWA has engaged a third-party contractor to support administrative/processing activities; staff at peak levels is expected to surpass 20 FTE
- Incentive outlays over the next five years are expected to surpass \$300 million
- The SNWA will continuously engage affected property owners throughout the implementation period
